

← This is plaster.  
The density  
increases as we

Found sparse small  
animal bones, bits  
of charcoal and few  
chunks of broken  
mud brick and  
plaster.

It is nearer to the  
all. It branches  
it in long "veins"

the greater dryness  
of this portion of  
U19816 is evidence  
that its higher  
moisture determine  
the darker colour,  
compared to  
U19817.

This is a possible  
plaster collapse, or  
a bin.

This is not a natural  
occurrence;  
however, it could be  
intentional or not.
